

ASI SEPTIC CARE is a commercial strength digestant containing selected strains of bacteria and enzymes. It was specially formulated for use in sewerage treatment plants and industrial waste water treatment facilities. After over twenty years of successful use in these applications, this high strength digestant is available to the public for treating septic and mound systems. It will digest organic waste and eliminate carry-over and foul odors, and significantly reduce noxious gases and the need for pump-outs. It will introduce micro-organisms into the soil to open soil pores and keep drain fields, mounds and leach beds operating smoothly with improved drainage. Homeowners can save the costly expense of replacing their leach beds, drainage field or mound system by using **ASI SEPTIC CARE**.

SEPTIC AND MOUND SYSTEMS: A septic tank is a very simple and small sewage treatment plant. Solid matter is held in the tank where bacterial digestion will break down into a liquid. Liquid waste flows out of the tank into the drain field or mound. There must be sufficient numbers of beneficial bacteria present for this digestion process to take place. Many household products (strong cleaners, toxic drain openers, laundry bleach, antiseptics, etc.) will kill the bacteria and the digestion process will be interrupted.

When the system is not operating properly, solids will wash out with the liquid and clog the pores of the drain field or mound.

LOT NUMBER:

NET WEIGHT: 1.75 Lbs.

ASI SEPTIC CARE

A COMMERCIAL STRENGTH DIGESTANT

- ★ **REDUCE SOLIDS BUILDUP**
- ★ **ELIMINATE STANDING WATER**
- ★ **REDUCE NOXIOUS GASES**
- ★ **ELIMINATE FOUL ODORS**
- ★ **EXTENDS USEFUL LIFE**

- ★ **ENVIRONMENTALLY FRIENDLY**
- ★ **SAFE TO USE**
- ★ **NON-TOXIC**

If the pores of the drain field or mound becomes clogged with solids, the liquid will not flow properly, creating puddles of standing water and causing the system to backup. Regular addition of **ASI SEPTIC CARE** to you system will insure that large numbers of beneficial bacteria are present to digest and liquefy all organic waste and extend the useful life of the system.

INSTRUCTIONS:

On initial treatment, for every 500 gallons of capacity, mix one pound of **ASI SEPTIC CARE** with ONE gallon of warm (85° to 100° F.) water. For best results, allow to stand for thirty minutes prior to pouring into toilet and flushing. Then use a quarter pound per month to insure proper working condition.

To keep drain field, leach bed or mound operating properly, dissolve ONE pound of **ASI SEPTIC CARE** into a gallon of warm water, following instructions. Pour into distribution box or breather pipe. Repeat weekly until flow is improved.
